

COVID-19 vaccination and test status in *myBeaumontChart*

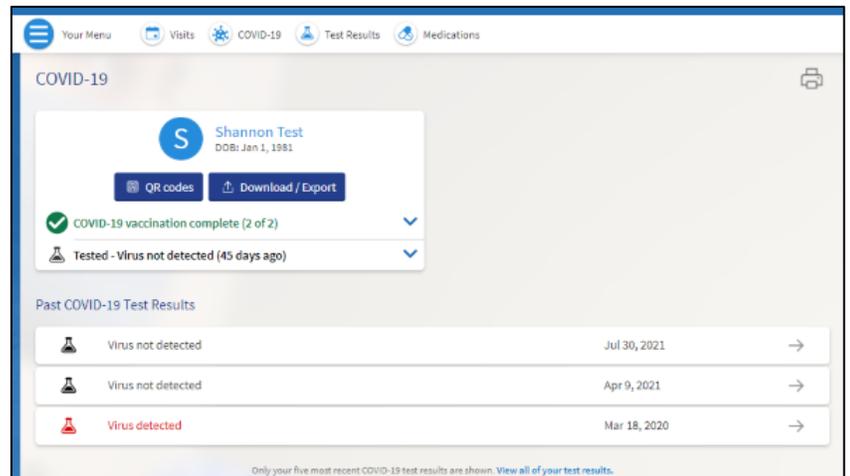

Accessing your COVID-19 Test Results and Vaccination Record

If you have been tested for or received COVID-19 vaccination(s) at Beaumont Health, you will be able to generate a QR code that contains your legal name, birthdate, and either your most recent COVID-19 test result or details of the COVID-19 vaccinations you've received. You can view your QR codes in two different ways

1. Sign in to your *myBeaumontChart* account at mybeaumontchart.com.
2. Click **Your Menu** and then select **COVID-19**.

3. You will then see your vaccination status and up to your last five COVID-19 test results (this does not include antibody testing), with your most recent result being at the top of the page.

If you need to provide proof of vaccination or test status, you have a few options. **Check with the validating organization to see what they accept as proof.**

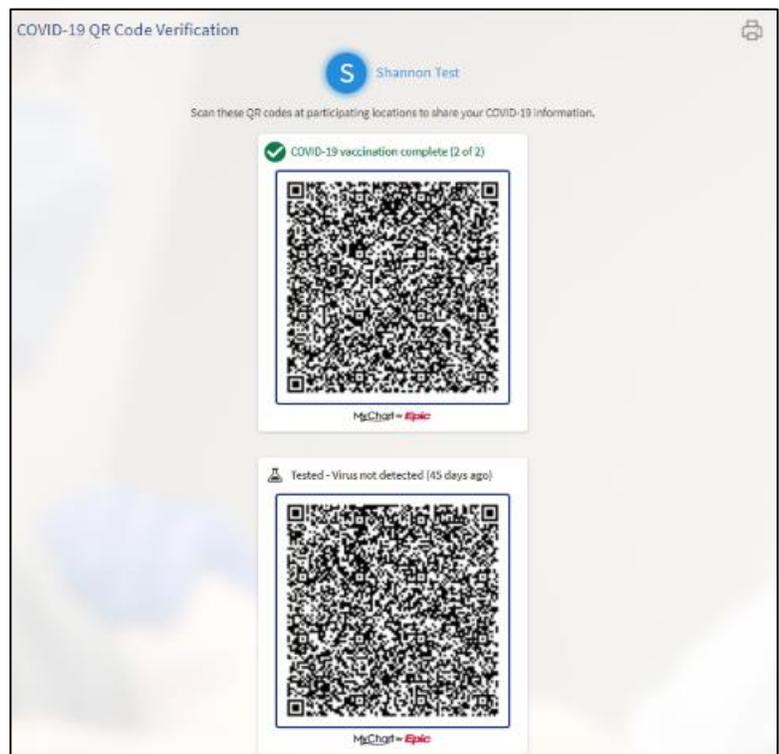

QR codes are now available to present to organizations who are using QR Code scanning apps and accept SMART Health Cards. QR codes (Quick Response codes) are a type of digital code used to store or link to information. It can only be read by a machine. The QR codes used for vaccination and test result statuses only contain your legal name and date of birth. For vaccines, they also contain vaccine type, date and location. For tests, they also contain test date, manufacturer, and result. For more information on SMART Health Cards, please visit <https://smarthealth.cards/>.

To access a QR code for vaccination status and/or latest test result:

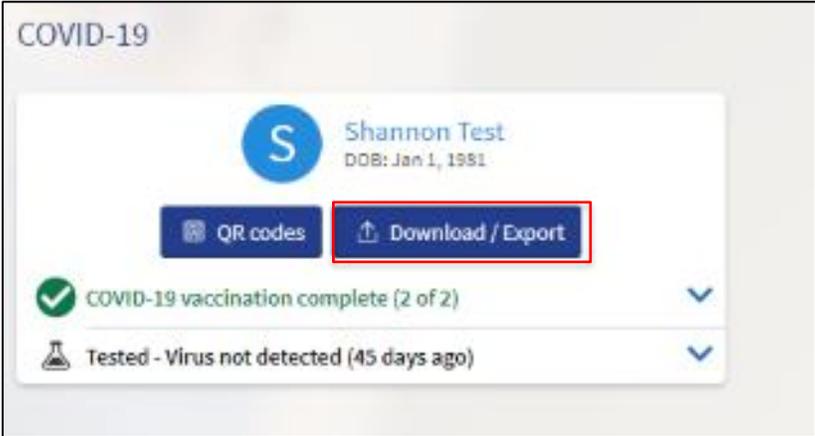

1. Click the **QR codes** button.

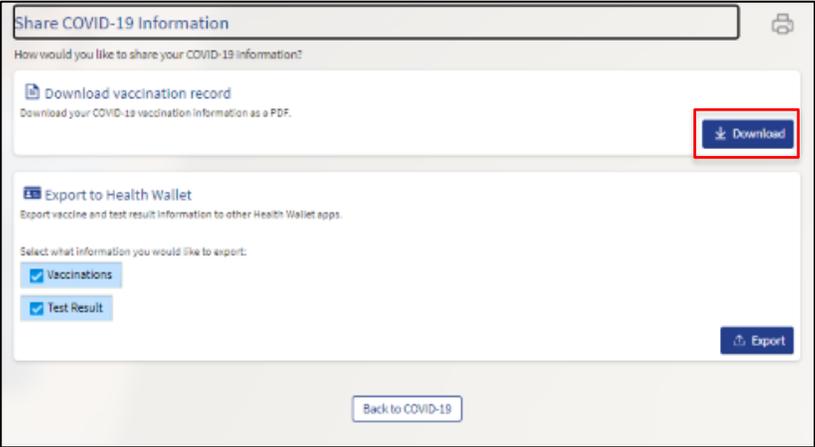

2. The QR codes will be available for the organization scanning the code on your phone. If you are accessing on your computer and would like to print the codes, there is a print icon available. We recommend using the download method outlined in the next step to print codes for vaccinations (download not yet available for tests).

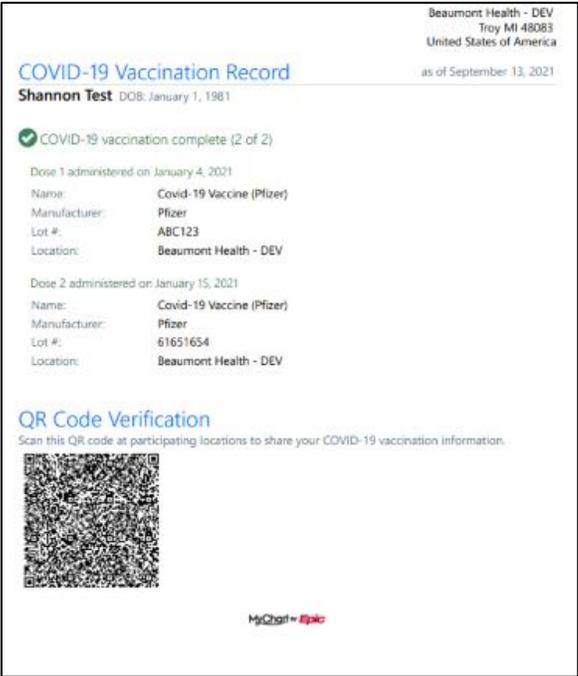

3. If you would like to download a copy of your vaccination status from the COVID-19 menu, click **Download/Export**.

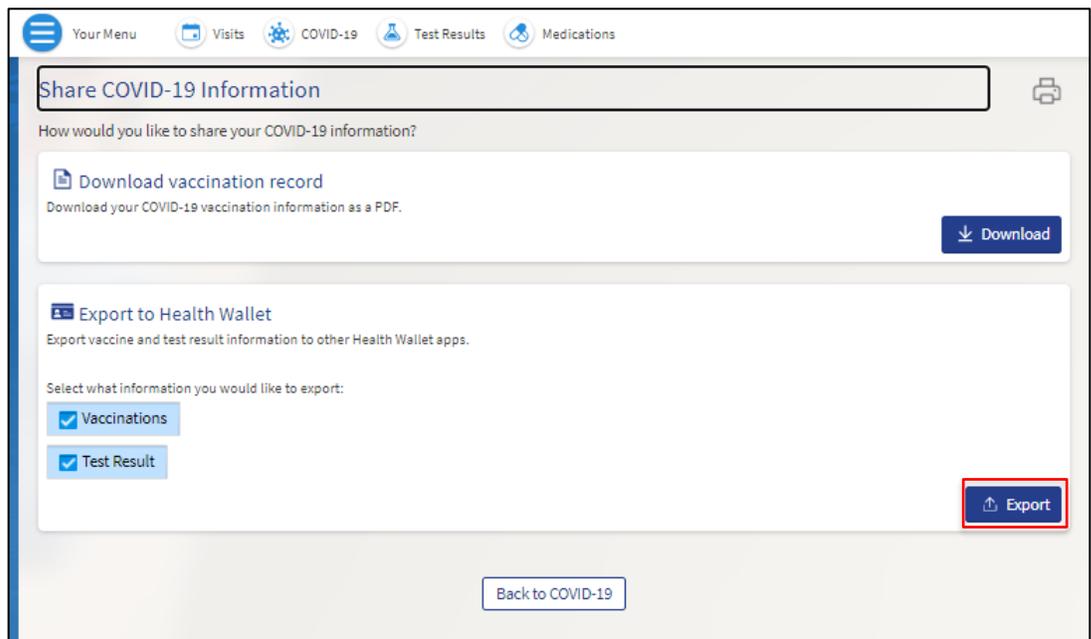

4. Click **Download**.

5. Once your download is ready, you can print it from your computer if needed.

You may also export your vaccine and test results to Health Wallet Apps (such as Apple Health). To do this, select what information you would like and click **Export**.

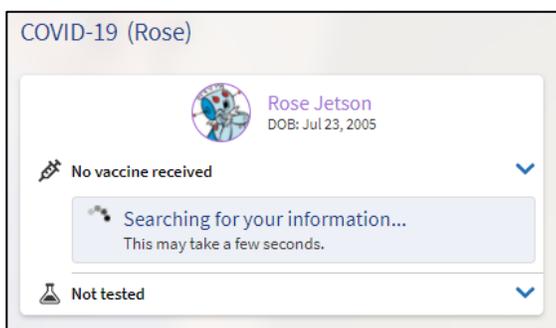

COVID-19 Vaccinations from Outside Organizations

If you received a COVID-19 vaccination at an outside organization, not at Beaumont, you may be able to see it in your myBeaumontChart account without taking further action.

If you do not see a COVID-19 vaccination/vaccination series from an outside organization, you can query the MCIR state registry and see if the system finds a strong match. If a match is found, you will be able to add this information to your myBeaumontChart account. **Please note, this functionality is only available for COVID-19 vaccinations and the system must find a match within the state registry.**

From the COVID-19 Menu, you'll see the message "Not seeing your vaccine?" Click **Update** to check for updates.

The system will search to find a successful match.

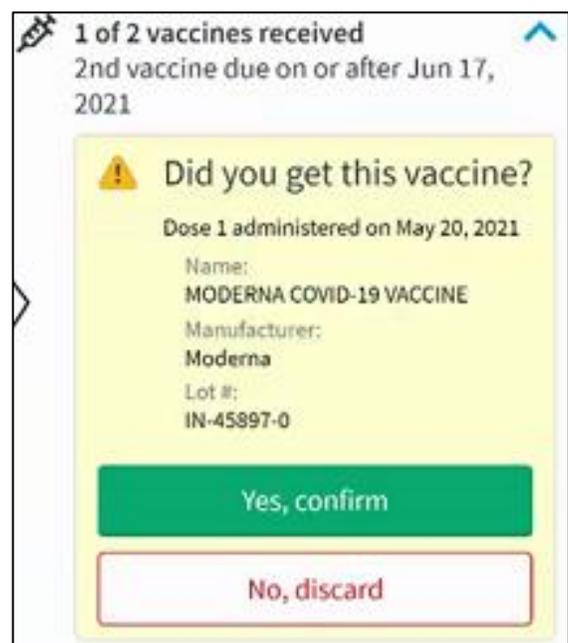

If a match is found, you will have the option to add the vaccination to your *myBeaumontChart* account

- a. If a high-quality match is found, it will be added to your account

- b. If a low confidence match is found, you will be presented with an option to add the vaccine to your account

If no matches are found, you can try to query the vaccination again later.
